

About Us

Concrete Central is a progressive company dedicated to utilizing the ancient medium of concrete to create modern, innovative and practical designs for your home or workplace.

Our designs encompass a vast array of objects including kitchen counters, sinks, bars, vanities, furniture, fireplace surrounds, hearths, and decorative tiles.

We pride ourselves in working closely with each customer and designer, listening carefully to your ideas and specific needs. The end results is a finished piece of art that is both practical and visually pleasing.

When most people think of concrete they visualize a gray sidewalk or driveway, but as you can see in our portfolio we have transformed this medium into something well beyond that thought. Concrete has a visual warmth, natural beauty, and a tactile quality. The creative possibilities in fabricating a concrete piece are endless. Because it starts as liquid stone it can be completely customized. We can form any shape, add integral colors, embed stones or colored glass to create a terrazzo effect. In addition, staining concrete offers a variety of interesting affects that are only limited by your imagination. These are just some ideas. In short, we start with a blank canvas and create something for you that is personal, durable, and one of a kind.

Please call for an appointment to view our entire portfolio, discuss ideas, and receive price quotes, We look forward to hearing from you!

Frequently Asked Questions

How Heavy is concrete?

A Standard 1.5" thick countertop weighs approximately as much as granite, and can be supported by standard cabinetry.

Will concrete crack?

It is possible that small hairline cracks may occur over time, but this doesn't effect the structural integrity. Although we feel this adds the patina of age to the piece, it can be patched if you prefer.

Can you duplicate it?

Because our work is handcrafted, each creation will vary slightly in color and texture. This makes each piece unique.

Does it stain?

We seal the concrete surface making it water and stain resistant.

Can I cut on a concrete counter?

We don't recommend it. It will dull your knives and possibly damage the sealer. We can form a place to inset a removable cutting board.

Will it burn?

It's best not to place extremely hot pots on the surface as it may damage the sealer. Built in trivets are an option.

How do I clean & maintain it?

Any mild, non-abrasive cleaner works well. Waxing it with beeswax will provide extra protection to the surface, and give it a nice finish. Depending on how much work the counter receives, we recommend waxing it every 3-6 months.
